Secure Your Oats for Next Season — Order Early!

As we prepare for the upcoming season, we encourage all customers to place their oats orders early to ensure stock is secured and available when you need it. Early ordering not only guarantees supply but also helps us plan ahead and maintain reliable stock levels across our most popular varieties.

Stock that will be available through our store include:

- **Nile** a specific variety of dual-purpose oats, known for its suitability as both a winter forage crop for grazing and a grain for hay or feed.
- **Blackbutt** is an oat cultivar commonly used for dual-purpose forage and grain production, especially in New South Wales.
- **Yarran** is an mid-late season oat variety that is suitable for grazing, hay, and grain production

Demand for these lines is already increasing, and early orders are the best way to avoid shortages or delays as we move closer to the new season.

If you'd like to discuss your requirements or lock in your preferred varieties, please get in touch with our team. We're here to help you stay ahead and well-prepared for a successful season. 🌱

Christmas and New Year Opening Hours

**XMAS EVE WED
24TH DEC**

OPEN 8am - 4:30pm

**XMAS DAY THUR
25TH DEC**

CLOSED

**NEW YEARS DAY
THURS 1ST JAN**

CLOSED

FRIDAY 2ND JAN

NORMAL TRADING HOURS

Koga
TETRAPLOID ANNUAL RYEGRASS
: Lolium multiflorum/Westerwolds

Quick Seed Facts

Lifespan

⊖ Short-term pasture

Ploidy

⊖ Tetraploid

Heading date

⊖ Mid (+10 days)

Recommended sowing rate

⊖ 25-30kg/ha

Suitability

- ⊖ Grazing
- ⊖ Hay
- ⊖ Silage

Seed treatment

⊖ XLR8® (insecticide) recommended, also available as untreated seed

Koga tetraploid annual ryegrass is a mid-maturing annual ryegrass with excellent seedling vigour. It is well suited to late autumn and winter grazing, and fodder production in medium to lower rainfall environments.

Features & benefits

- Rapid establishment and growth
- Quick to first grazing
- High winter dry matter yields
- Provides valuable feed in cooler periods of the year
- Excellent option for silage/hay production
- Mid-maturing type to provide bulk dry matter for silage in early spring

STRENGTHS

- ⊕ Quick establishment
- ⊕ High winter dry matter production
- ⊕ Silage/hay production

ESTABLISHMENT

Performance optimisation or limitations for your soil type can be discussed with your local agronomist.

Sowing time: Sow when soil temperatures are at least 10-12°C, in early to mid-autumn. Pastures may be slow to establish if soil temperatures drop below 8°C. Consult your local agronomist or Territory Manager for your ideal sowing time.

Sowing depth: 10-15m.

Seed treatment: XLR8® treatment is recommended for targeted insect protection and increased vigour at establishment.

Allflex Changes to Freight Pricing

Effective 1 November, Allflex has introduced a new, simplified freight structure.

Freight charges, previously calculated by order weight, are now a flat rate of \$25.00 + GST per order.

We apologise for the late notice regarding this change. To make the most of the new flat rate, we recommend you order your year's worth of tags in one order rather than placing multiple orders throughout the year. This helps minimise freight charges and ensures you have tags on hand when needed.

If you have any questions about the updated freight fee, please feel free to get in touch.

Pre-Season Reminder: Order Your Fertiliser Early!

As we head toward the end of the year, we'd like to remind all customers to get their Fertiliser orders in early. Placing your orders ahead of time helps us secure the stock you need and ensures smooth delivery heading into next season. Demand is already building, and early planning is the best way to avoid delays or shortages.

Important Notice: Incitec Pivot Christmas Upgrades

We would like to inform you that the production of 1 Tonne and 500kg bagged products will be closed from Monday, 1 December 2025 to Friday, 16 January 2026 due to a major upgrade of the bagging line at our Kooragang Island site. During this period, only existing bagged stock on the floor will be available, while bulk products and 25kg bagged products will remain unaffected throughout the upgrade. These upgrades represent a significant investment by IPF to ensure the ongoing reliability and accuracy of the products we dispatch to our customers.

What You Can Do Now

- ✓ Place Fertiliser orders as soon as possible
- ✓ Plan ahead if you require 1T or 500kg bags during the outage window
- ✓ Contact our team to discuss forward planning or product requirements
