THE BENEFITS OF USING RHINO GARD IBR WITH BOVISHIELD MH-ONE TO PROTECT AGAINST BOVINE RESPIRATORY DISEASE (BRD)

The most comprehensive vaccination program utilising BoviShield MH-ONE includes co-administration of Rhinogard IBR.

The flow chart demonstrates that when both vaccines are given at the same time, there are two different stages in the disease process where the cascade of events leading up to BRD outbreak are inhibited. Rhinogard IBR works at the early stage of disease development to reduce the impact of IBR in the chain of Events. For cases where other viruses are involved early on, Bovi-Shield MH-ONE works later to prevent pneumonia's caused by *Manheimia haemolytica* (MH). When both vaccines are administered at the same time, they have a broader impact on pulling up on the course of disease than either product used in isolation.

Newly available in one convenient combo pack saves time and money

MULTIMIN[®] EVOLUTION INJECTION FOR CATTLE

Multimin Evolution Injection for Cattle is a chelated trace mineral injection for beef and dairy cattle deficient in and/or responsive to manganese, zinc, selenium and/or copper supplementation. Multimin Evolution contains selenium, copper, zinc and manganese, which are required for optimal health, production and fertility.

**10% Bonus Pack
Available now!**

RECOMMENDED FOR

- Multimin Evolution has been shown to improve first cycle conception rates by up to 19.4%.
- Pregnancy rates in breeding females treated with Multimin Evolution are up to 12% higher than untreated females.
- Bulls treated with Multimin Evolution 90 days prior to joining had a 22% higher sperm concentration and significantly more motile sperm than control animals.
- Multimin Evolution improves cow and calf health and speeds up vaccine response. Don't vaccinate without Multimin Evolution.

WHY CHOOSE MULTIMIN EVOLUTION?

- Multimin Evolution contains the highest trace mineral content (90 mg/mL) 24 of any other injectable trace mineral product on the market in a low volume formulation that is rapidly absorbed, readily utilised and provides sustained antioxidant activity during high demand periods.
- Multimin Evolution has 50% more Zinc than any other injectable trace mineral product on the market 24. Zinc is critical for reproduction, immunity and to meet the high demands of modern cattle.

MILK REPLACERS - LAMB, KID & CRIER

PROFELAC SHEPHERD IS AUSTRALIA'S #1
LAMB-KID-CRIA MILK REPLACER.

ProfeLAC SHEPHERD is a nonmedicated milk replacer for lambs, kids, crias. It is easy to mix and consistently performs under all systems. It is specifically designed for rearing lambs, kids and crias however is a suitable milk replacer for multispecies including fawns, piglets, pups, calves and foals.

BENEFITS

Application – easy to mix; convenient all-in-one product.
Performance – improve gut health to reduce scours; improve calf condition and growth rates

MILK REPLACERS - CALF AND FOAL

PROFELAC GREEN IS AUSTRALIA'S #1
NONMEDICATED CALF MILK REPLACER.

ProfeLAC GREEN is a non-medicated calf milk replacer and foal milk replacer. It is designed for rearing infant animals on the farm of origin and/or for less intensive operations where the risk of disease is relatively low. Suitable for rearing all dairy and beef breeds for the start of lifetime performance.

BENEFITS

Application – easy to mix; convenient all-in-one product.
Performance – improve gut health to reduce scours; improve calf condition and growth rates.

INJECTION RANGE

BOMECTIN™ F BROAD-SPECTRUM ANTIPARASITIC INJECTION FOR CATTLE

Bomectin F is a broad spectrum, antiparasitic injection for beef and dairy cattle containing ivermectin and clorsulon. Ivermectin is a macrocyclic lactone endectocide that has activity against adult and larval stages of parasitic nematodes, as well as susceptible external parasites. Clorsulon is a sulphonamide, which is effective against adult liver fluke.

SELOVIN™ LA FOR CATTLE AND SHEEP

Selovin LA Injection is a long-acting selenium supplementation for cattle and sheep. Selenium is a trace element that is vital for normal metabolism; it is an essential antioxidant that prevents and repairs cell damage, and plays a role in muscle and immune function, and the synthesis of thyroid hormones. Selovin LA works to elevate selenium blood and tissue levels in deficient states.

COBALIFE™ VB12 FOR SHEEP AND CATTLE

Cobalife VB12 is a vitamin B12 injection for the treatment and control of vitamin B12 deficiency in sheep and cattle. Vitamin B12 is an essential vitamin required for metabolic functions, including fat and carbohydrate metabolism and protein synthesis. It is also vital for glucose production in ruminants, which is essential to meet the high energy demands of growth and lactation.
